

Creating and Accessing the Copilot Agent

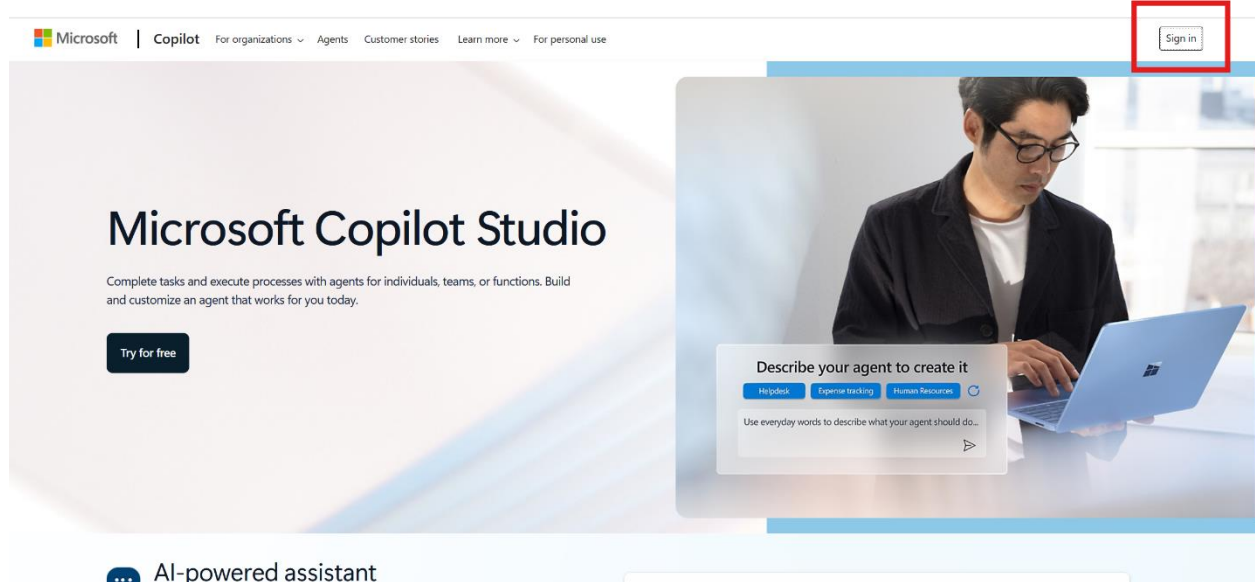

By Jiya Patel, Adrian Chila, Larry To

Using Microsoft Copilot to access information on Advantech

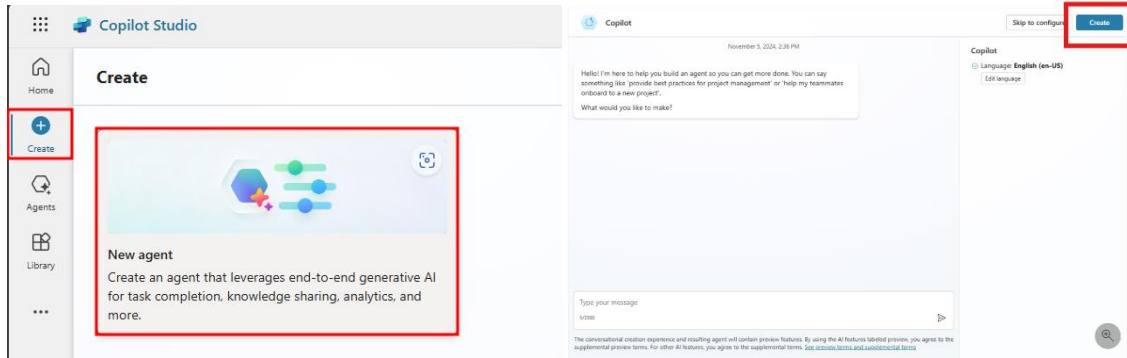

Purpose: This guide shows you how to create and train an AI agent using Microsoft Copilot Studio. With this trained model, you can ask questions about the company from your Teams, and it will access the database from SharePoint to find the answer.

Part I: Creating an agent

Step 1: Open Microsoft Copilot Studio (Go to: <https://copilotstudio.microsoft.com/>) and sign in with your Advantech account info.

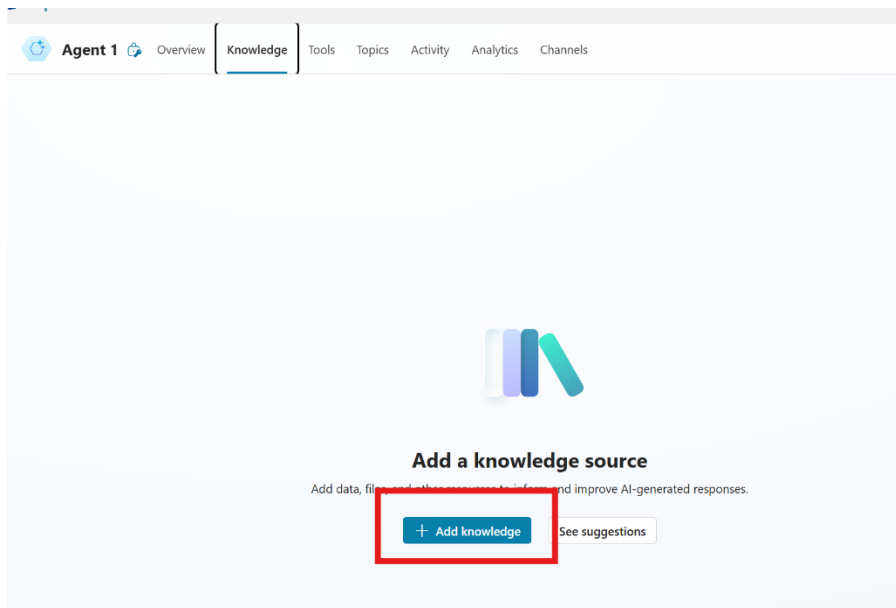

Step 2: Select Create an agent on the left tab, then create again on the top right.

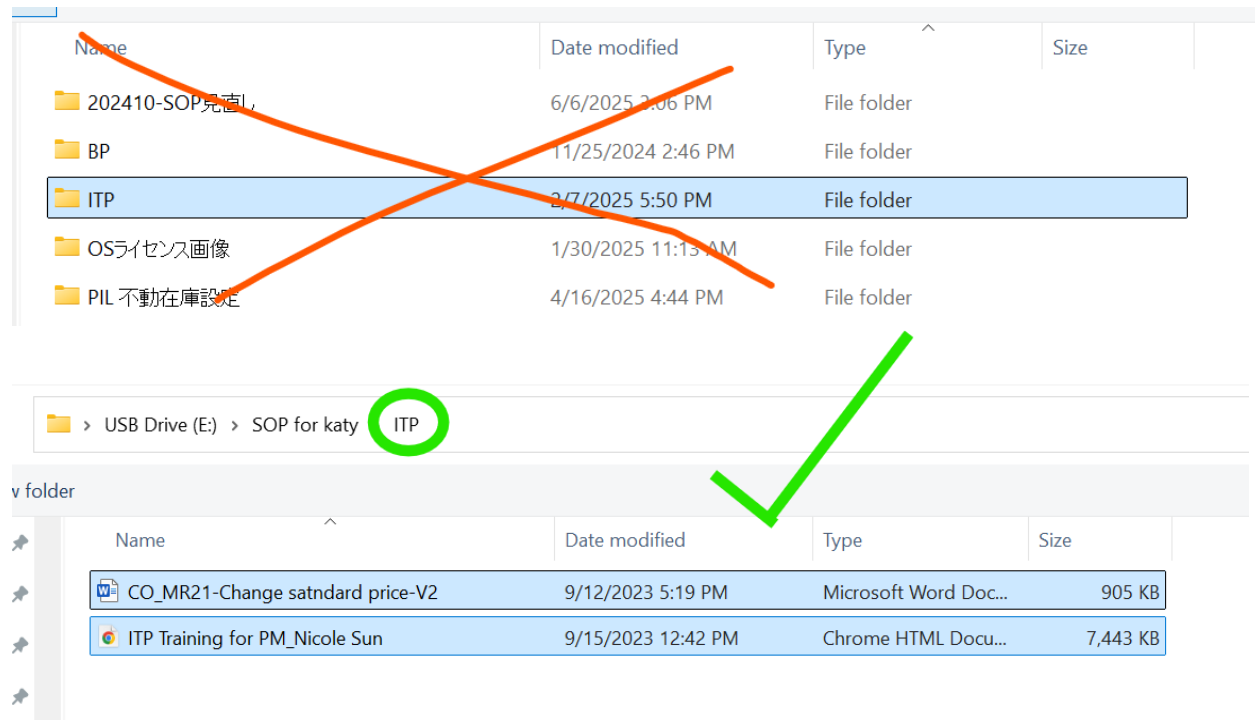

Note: Make sure to choose the correct language (that you would like your answers to be in) as you cannot change language after creating the agent. If you want your answers to be in Japanese, please choose Japanese.

Step 3a: Click on the knowledge tab. This is where you upload files to the AI model to train it

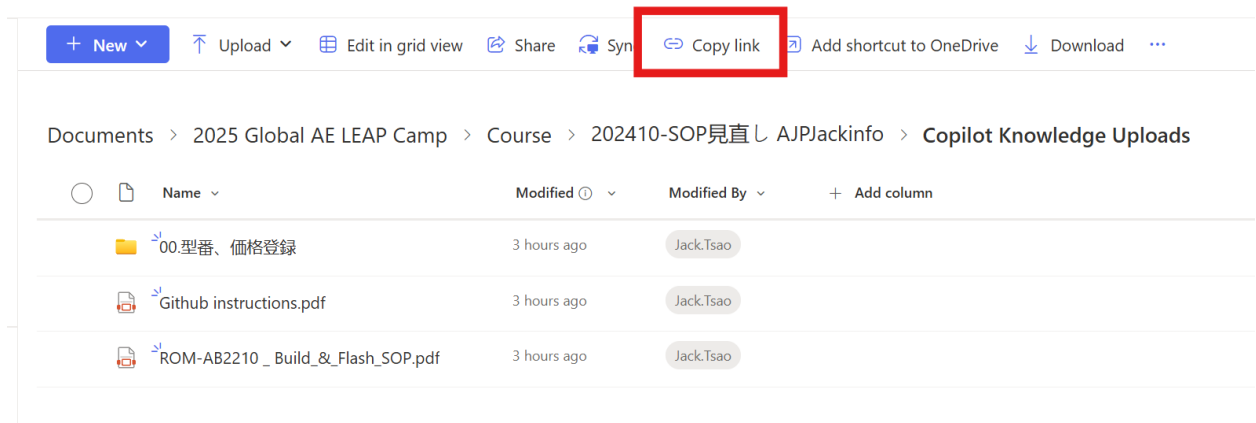

Note: You **CANNOT** upload folders from your device directly. You can only add text-based files (power point, word, pdf, etc.) So, if you want to add information from a folder, open the folder and select the text files

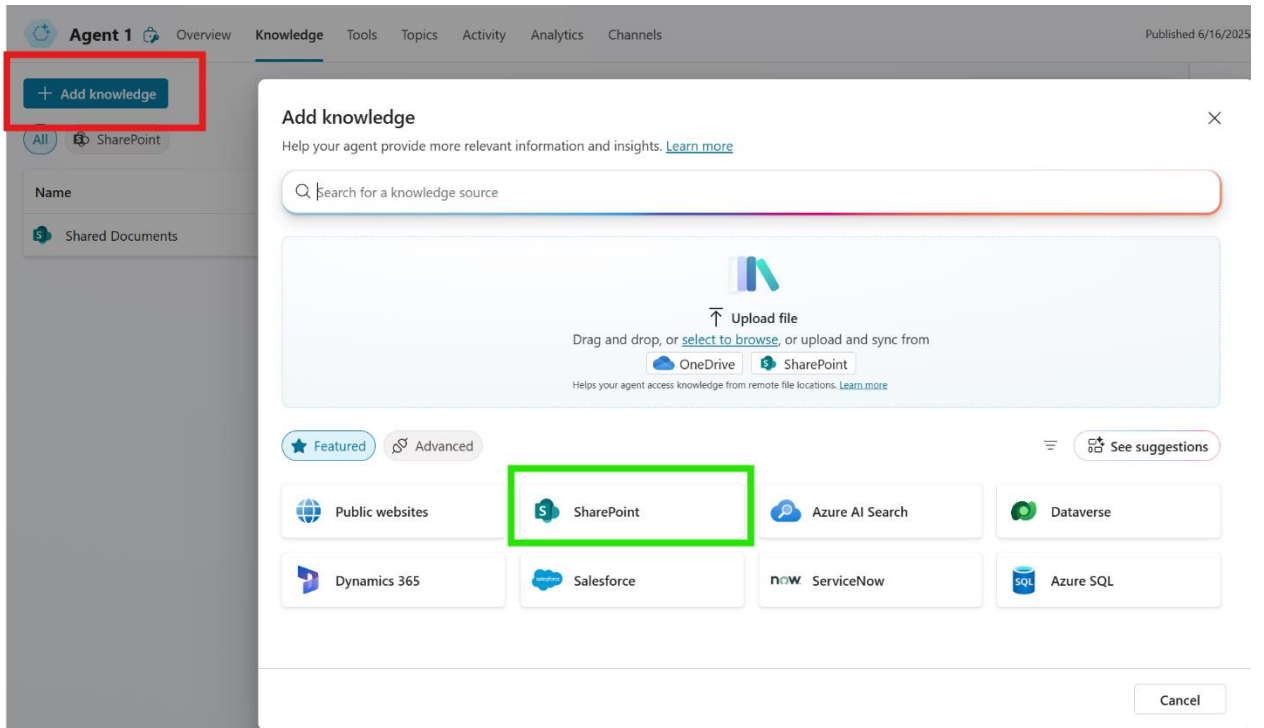

Step 3b: To add folders from **SharePoint** (not your device):

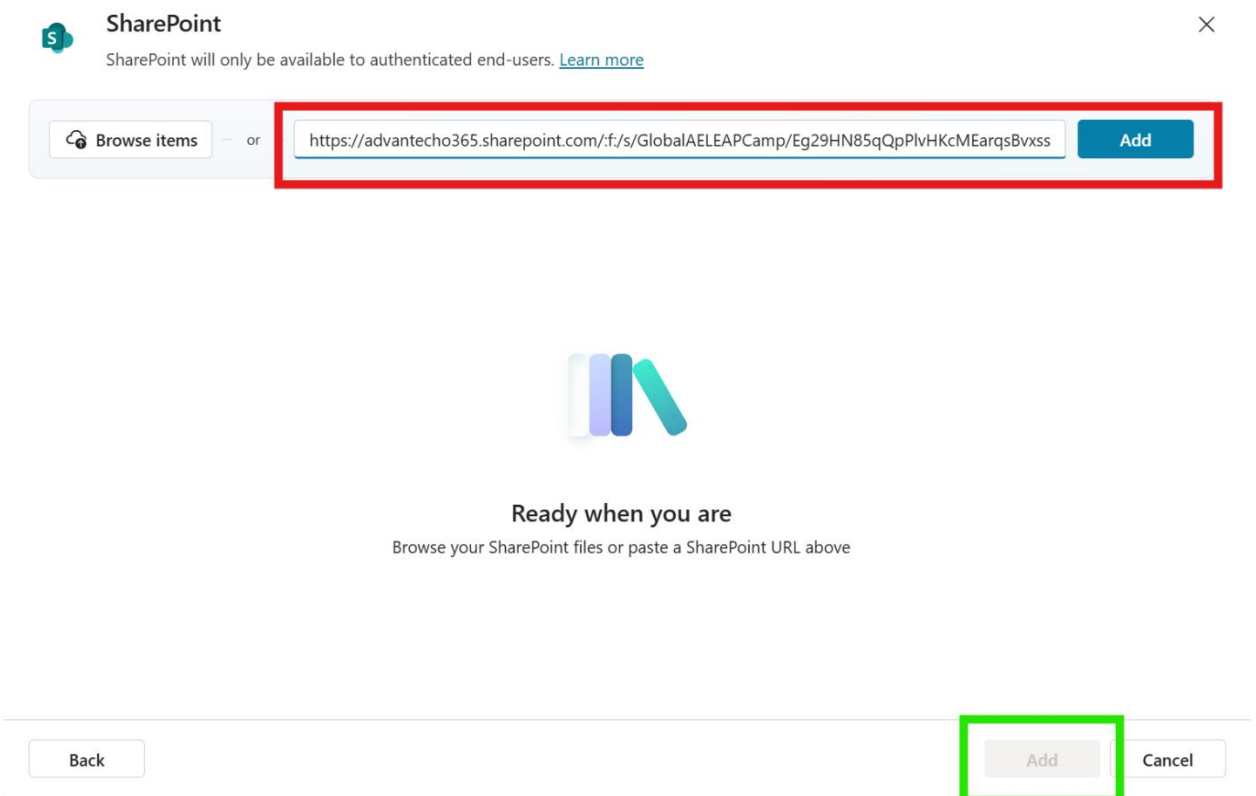

i. Open that folder on SharePoint and copy the link:

ii. Go back to your Copilot Studio Knowledge tab, press “Add Knowledge” and then “SharePoint”:

iii. Paste the copied link and “Add”:

Step 4: After the files are uploaded, you can test the agent. Do this by asking a question (that refers to one of the files you added) on the right side, as mentioned in the image below:

The screenshot shows the 'Agent' interface with a navigation bar at the top containing 'Agent', 'Overview', 'Knowledge', 'Tools', 'Topics', 'Activity', 'Analytics', and 'Channels'. The 'Knowledge' tab is active. Below the navigation bar, there is a '+ Add knowledge' button and a search bar labeled 'Search knowledge'. A table lists the uploaded files with columns for Name, Type, Last modified, and Status. The files include various PDFs and PPTs, mostly in 'In progress' status, with some 'Ready' files like 'ZBPP54C SOP Auto PN extend.pptx'. On the right side, there is a 'Test your agent' chat window. It contains a message from the agent in Japanese and a text input field with the placeholder 'Ask a question or describe what you need'. The input field is highlighted with a green box.

For example: I will ask the agent “How do I create RD project code? This info is stored in the KUT-CO-IO0101A word file that I entered as knowledge.

The screenshot shows a Microsoft Word document titled 'KUT-CO-IO0101A_create RD project code'. The document content includes a heading 'KO01 - Create RD project code' and a list of steps: 'Accounting -> Controlling -> Internal orders -> Master data -> Special functions -> Order -> Create'. To the right of the text is a screenshot of the 'SAP Easy Access' menu, showing the path 'Favorites' -> 'SAP Menu' -> 'Office' -> 'Cross-Application Components'.

It will give a response based on the files given

21 分前

how do i create rd project code?

4 分前

RDプロジェクトコードの作成方法 手順

1. 内部オーダーの作成

○ 経路: 会計 -> 管理会計 -> 内部オーダー -> マスターデータ -> 特別機能 -> オーダー -> 作成

○ 操作:

- オーダータイプを入力:
AD03
- プロジェクトコード、説明、会社コード
(**EU80**)、機能領域
(**0500 (R&D)**) を入力し、次の画面「一般データ」に進む ①.

2. 一般データの入力

プロジェクトコードの命名規則

- アカウントカテゴリ:
 - **RD**: NPIリリース時に使用
 - **MP**: EPIリリース後に使用
- 年コード: YY
- **MP**: 非M/Pの場合は0、M/Pの場合は1
- ビジネスグループ: EAI PG (システムによるデコード)
- 製品部門: EAI PD (システムによるデコード)
- 現在の番号: 長さ = 3 (システムによる自動生成) ②.

注意点

- プロジェクトコードの命名規則:
 - ACG BUの下にあるADLoGは、RD0900205006のように命名される
 - EPI提出後、Financeが新しいプロジェクトをリリースし、MP0900205006のように命名される ②.

この手順に従って、RDプロジェクトコードを作成することができます。

2 件の参照 ▼

1 KUT-CO-IO0101A_create RD p...

2 Project code creation process....

- The green outline is the answer “Accounting -> Controlling -> Internal orders -> Information system -> Reports for Internal Orders -> Master Data Indexes -> Internal Orders” but in Japanese because that is what I set the language to when creating the agent
- At the bottom of the answer, it also shows what file it got the information from (KUT-CO-IO0101A)

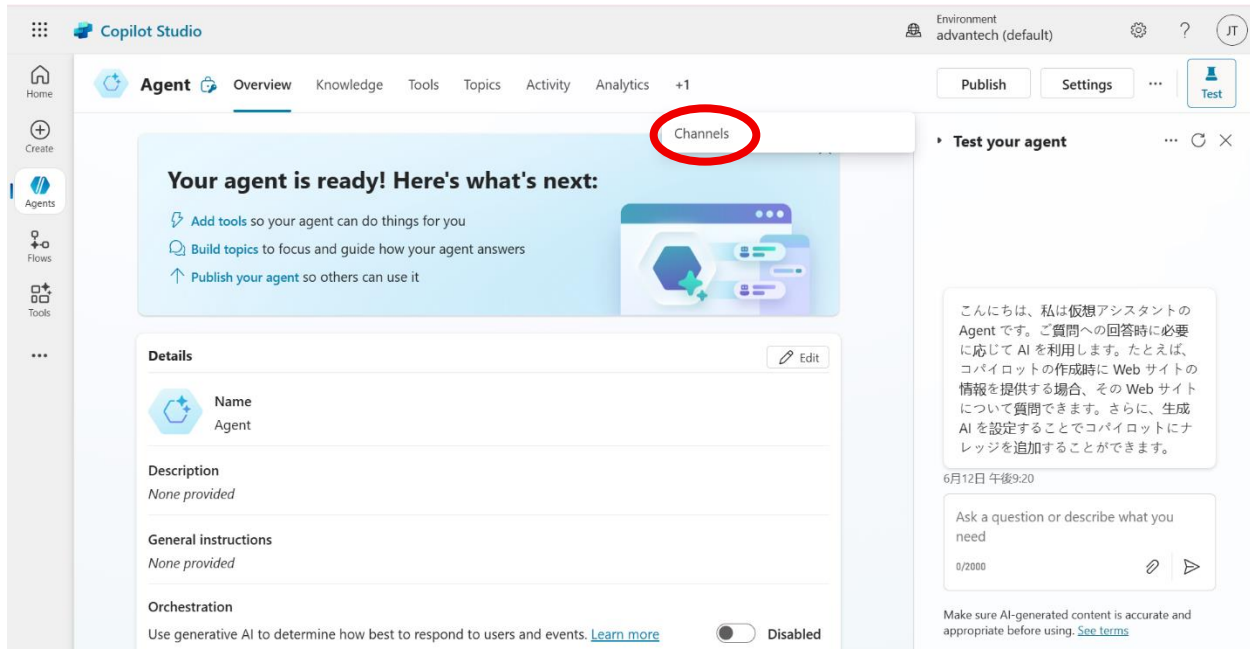

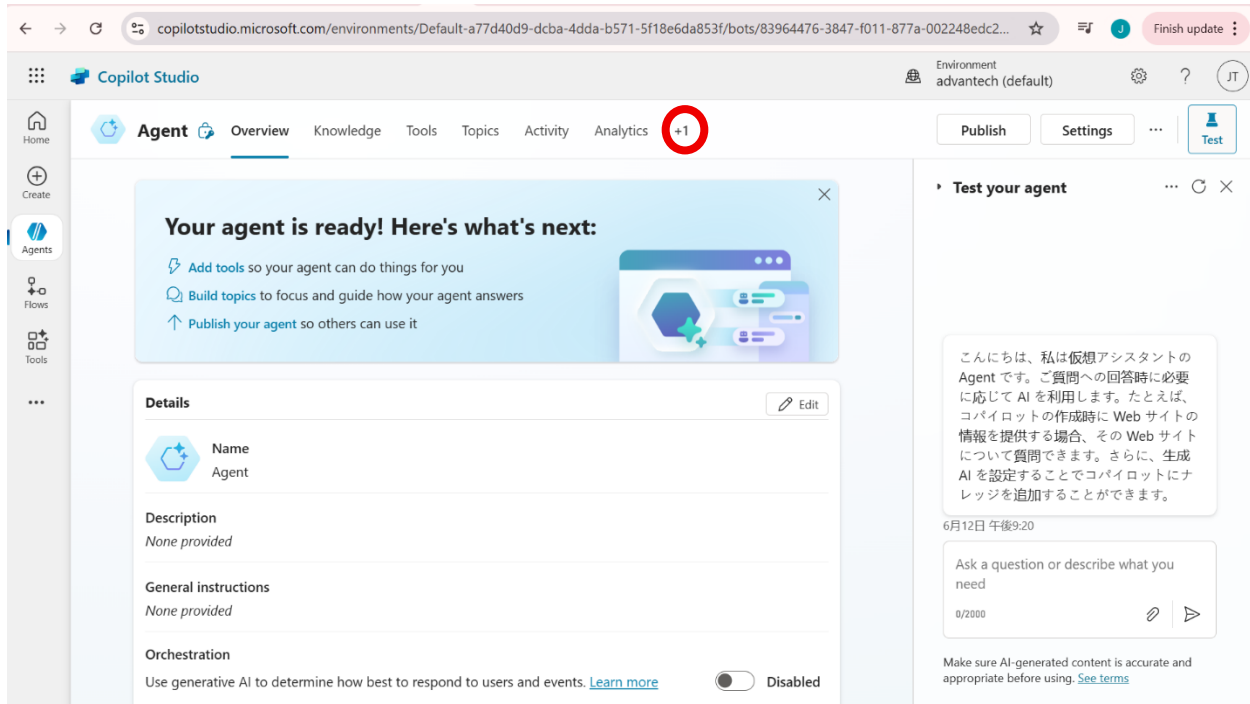

Tips

- You can ask the agent a question in any language, and the answer will be in the language you initially chose. Even if the information from the files is in another language, the agent will translate it for you in the answer
- When you click the referred file, it will show the text without any pictures from the original file.
- If you would like to improve the model or learn more about it, please refer to this: <https://learn.microsoft.com/en-us/training/modules/power-virtual-agents-bots/1-introduction>

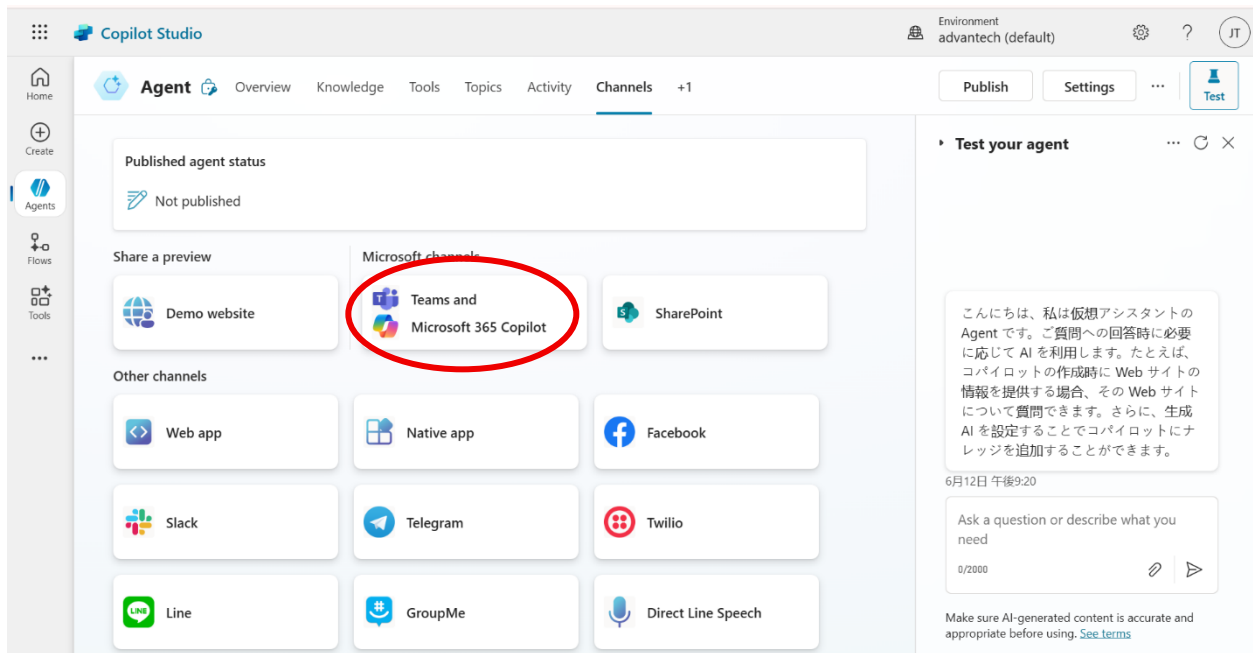

Part II: Adding the agent to your Teams

Step 1: Open your Copilot Studio, which was at <https://copilotstudio.microsoft.com/>

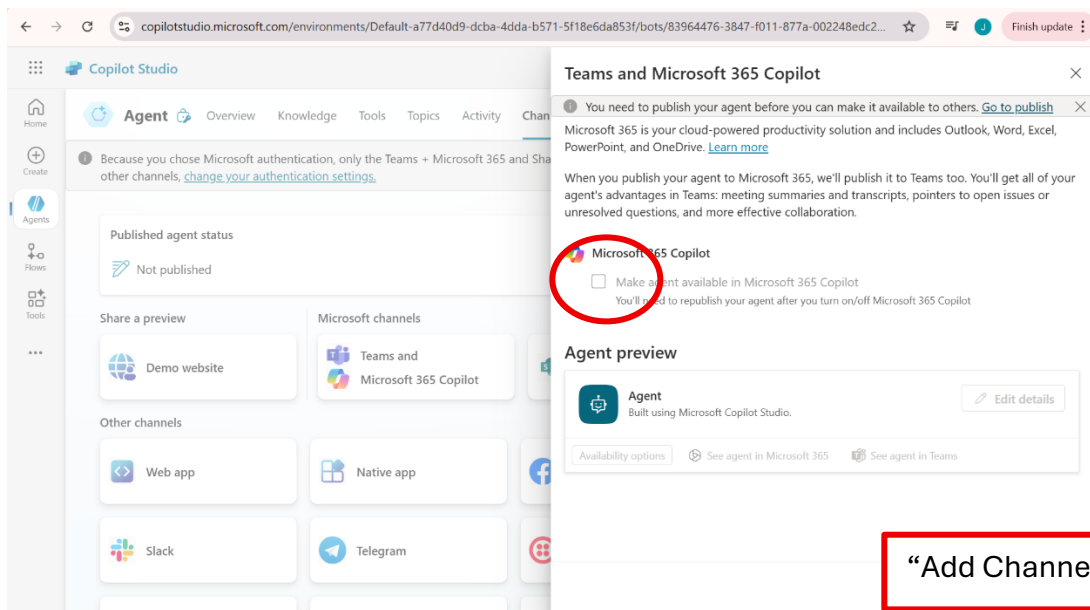

Step 2: Click on “+1” followed by “Channels”.

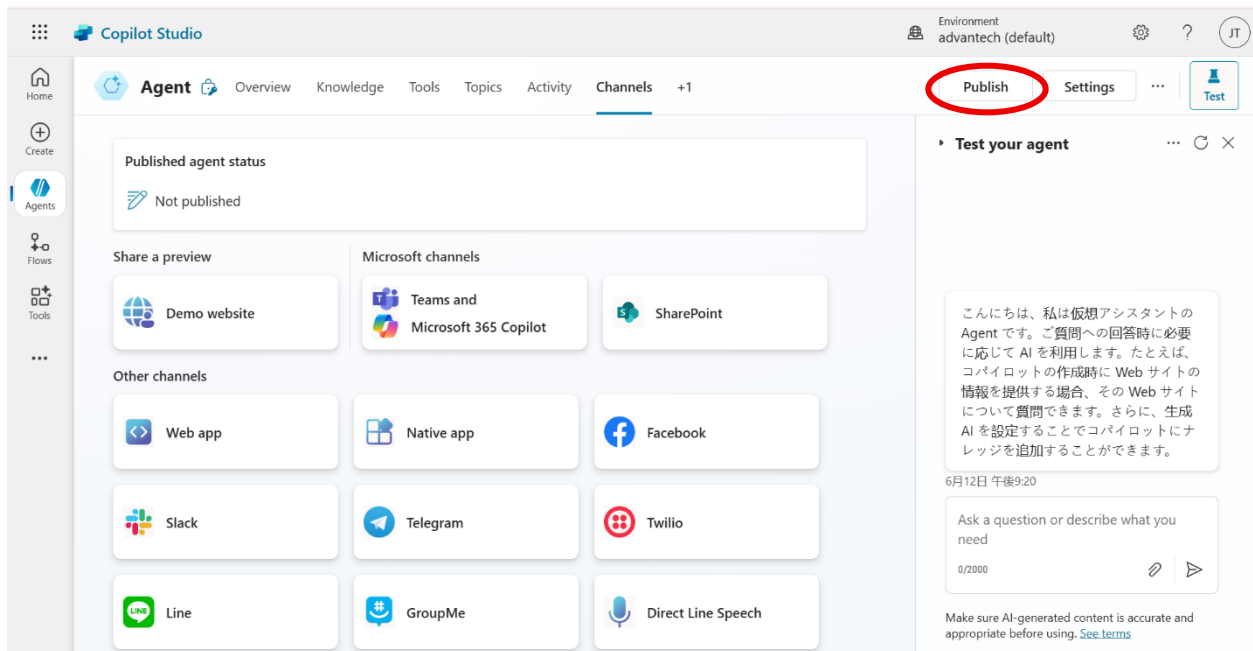

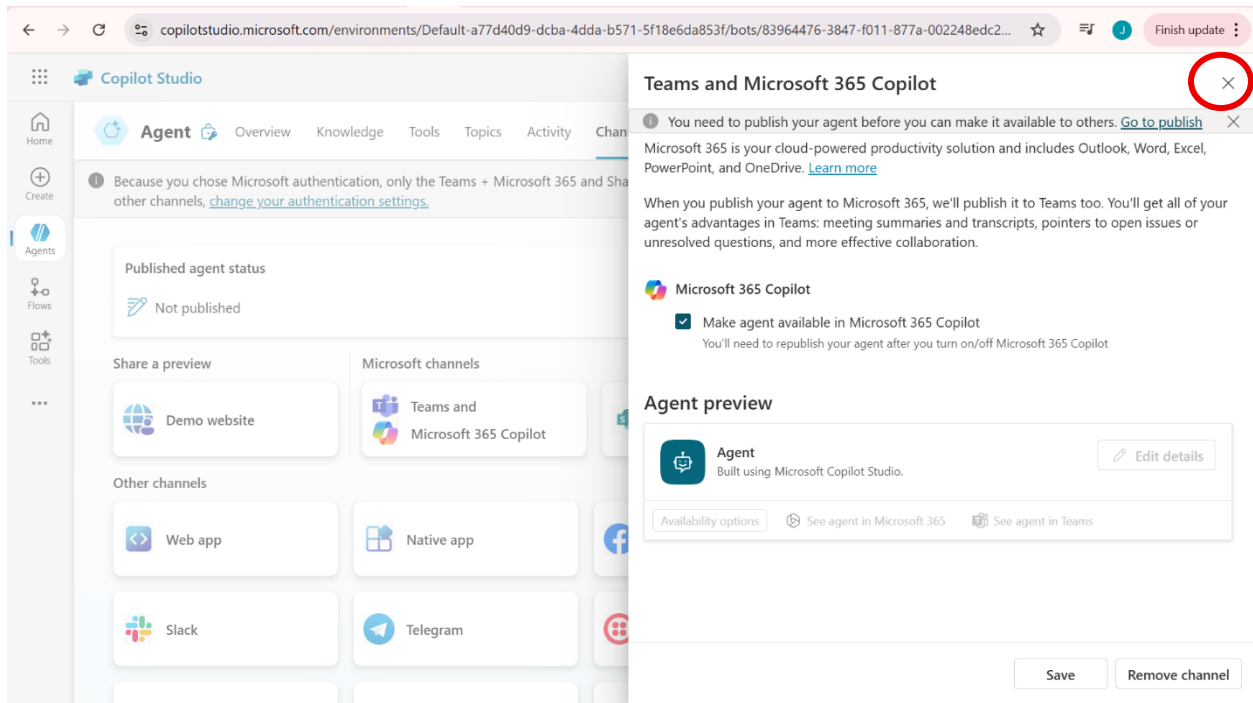

Step 3: Click on the Teams icon.

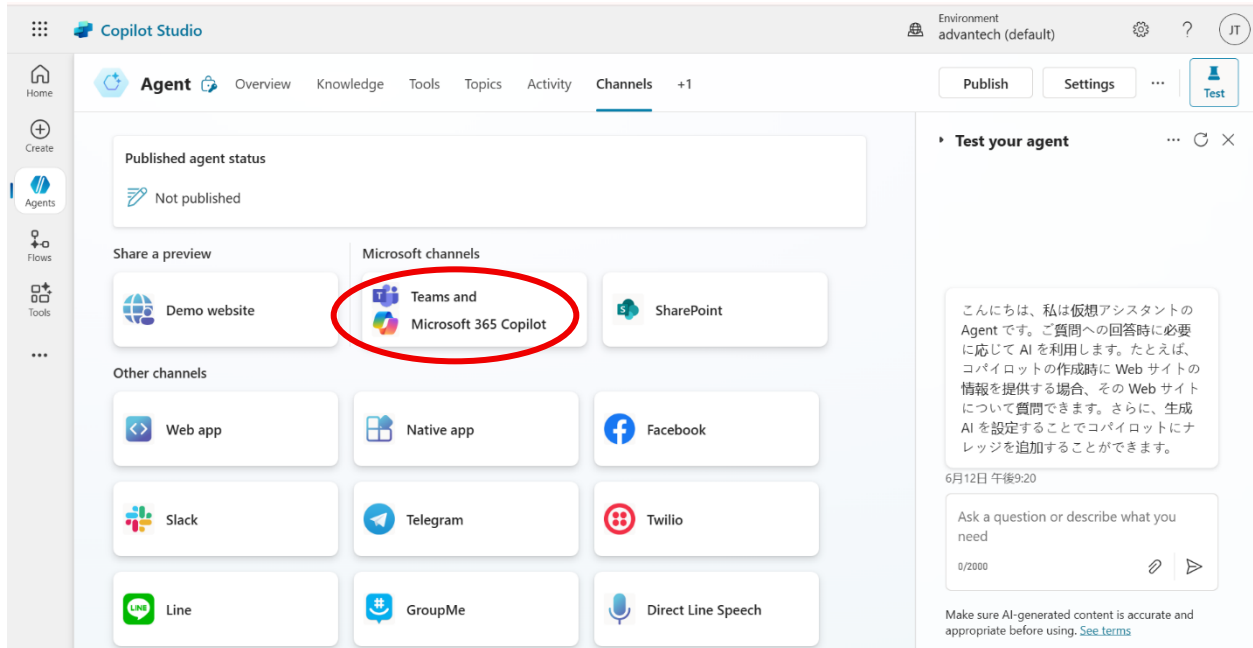

Step 4: “Make the agent available to Microsoft 365 Copilot” and “Add Channel”.

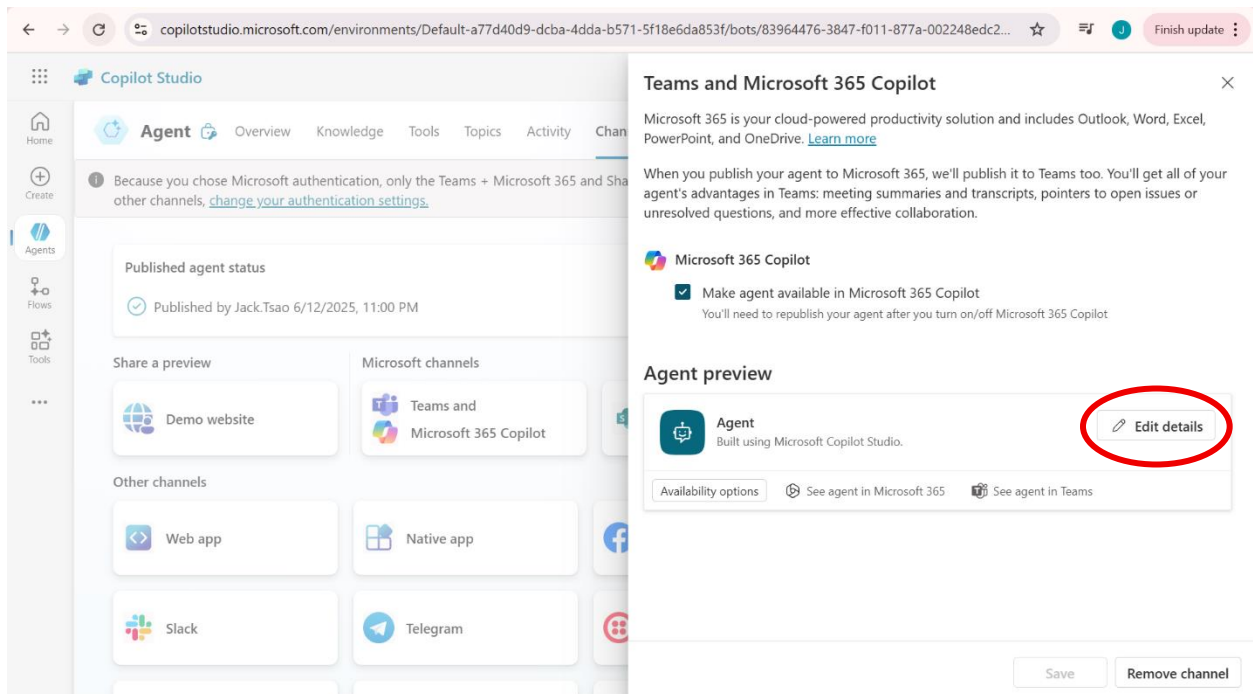

Step 5: Press X and publish.

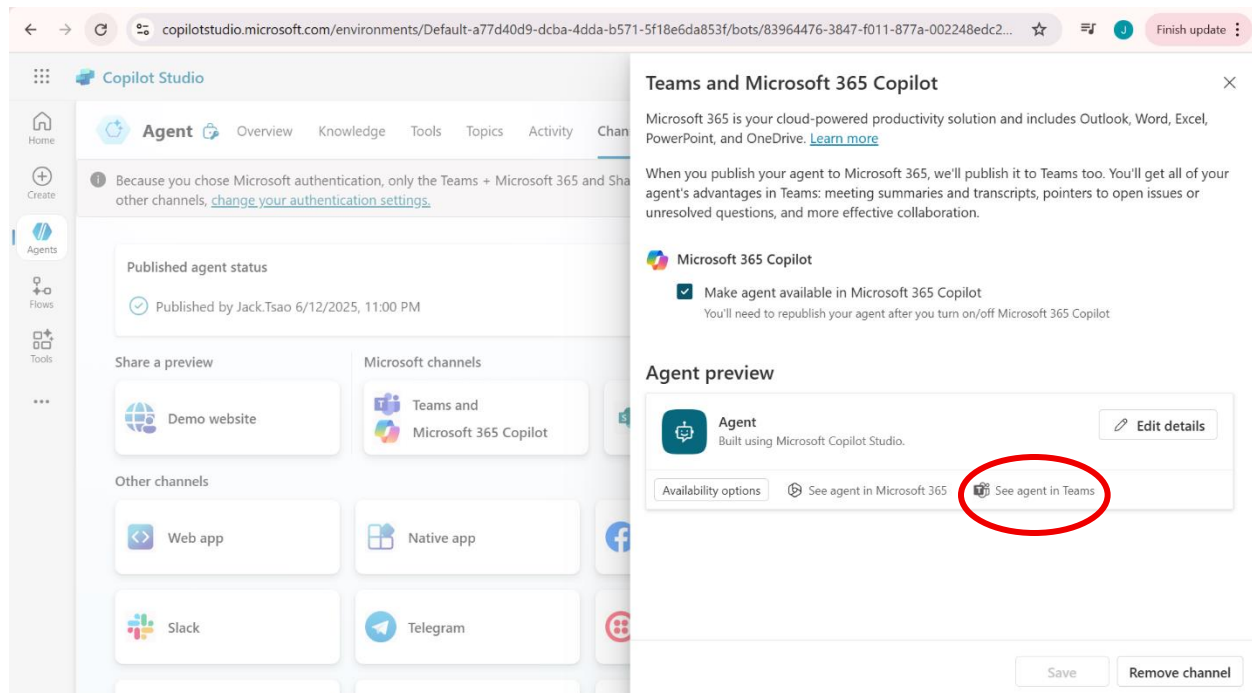

Step 6: Click on the Teams icon again.

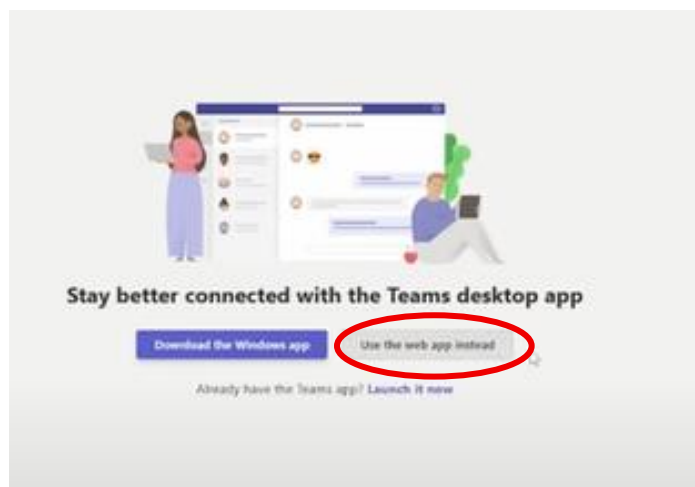

Step 7 (optional): Edit the agent name/icon/other such settings and save.

Step 8: Press “See agent in Teams.”

Step 9: You can select “use web app” if you don’t have the app.

Step 10: On your Teams page/app, click “Add”. The agent should then appear on the left vertical bar. If it does not, click on the three dots and find it there.

Part III: Adding a Support Topic

Purpose:

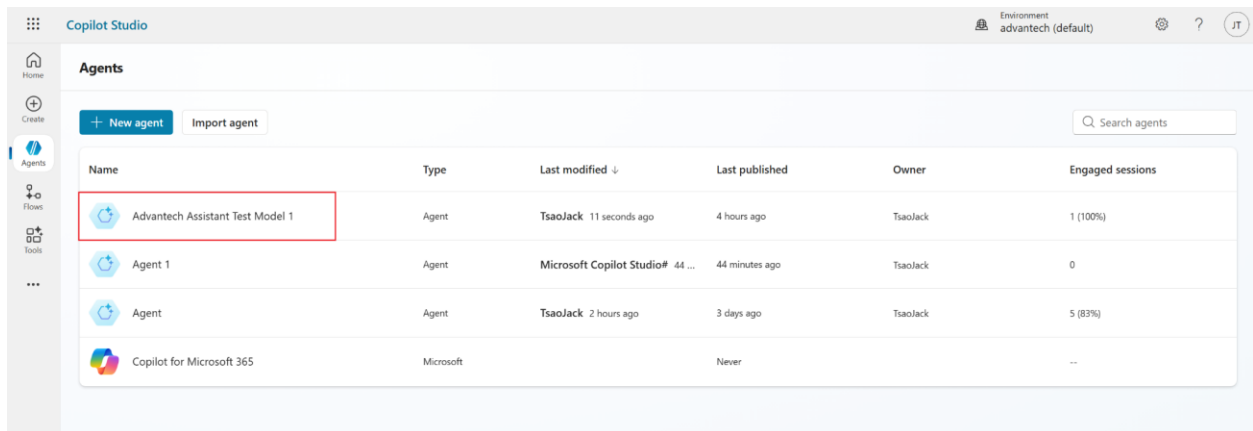

To guide users through creating a topic that responds to user questions like “help” or “support” by providing contact info for Advantech Support.

Step 1: Getting Started

1. Access Copilot Studio which was at <https://copilotstudio.microsoft.com/>

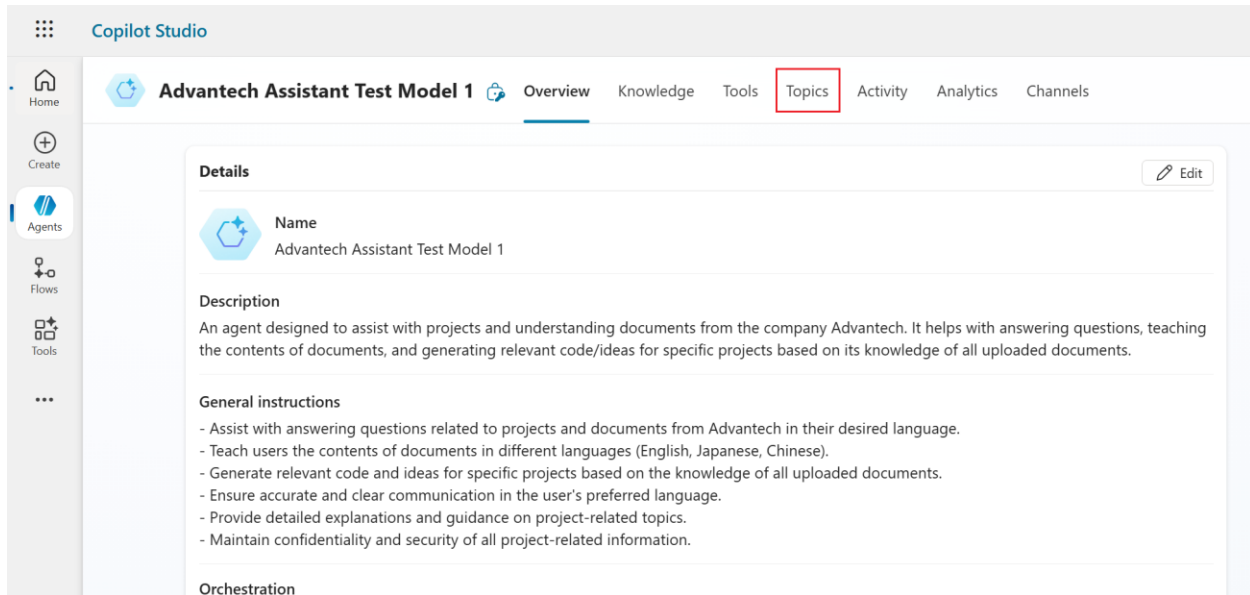

Step 2: Create a New Topic

1. Access your existing model.

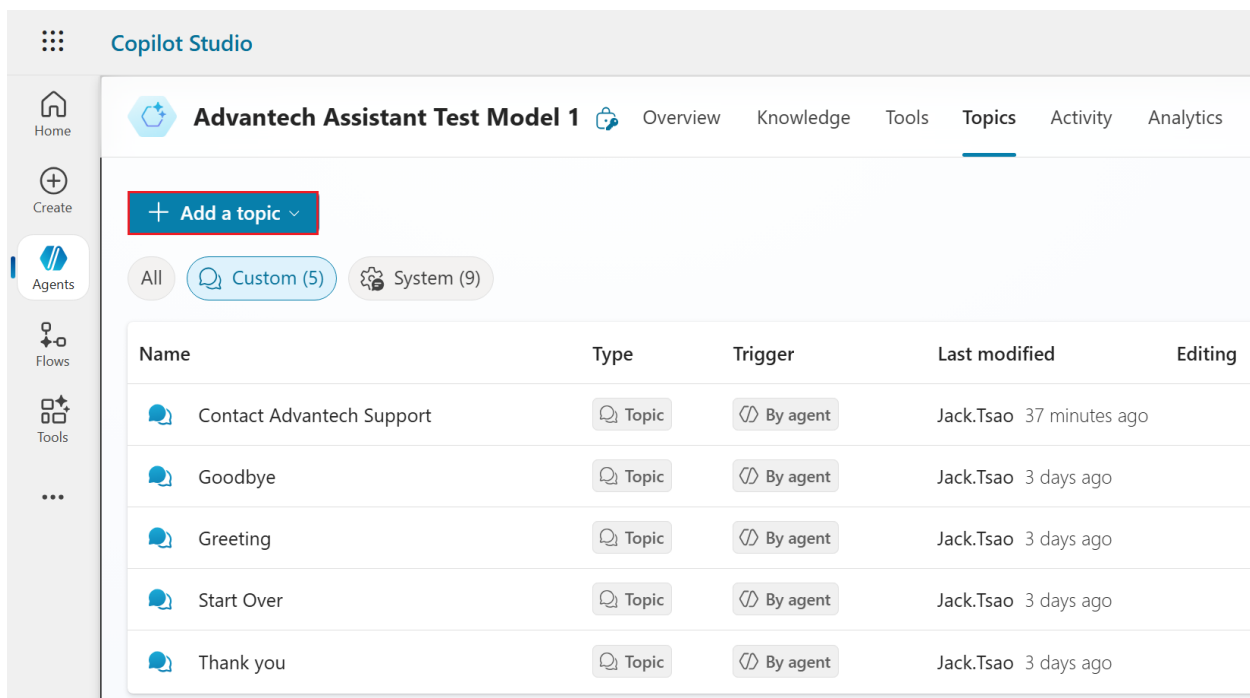

Name	Type	Last modified	Last published	Owner	Engaged sessions
Advantech Assistant Test Model 1	Agent	TsaoJack 11 seconds ago	4 hours ago	TsaoJack	1 (100%)
Agent 1	Agent	Microsoft Copilot Studio# 44 ...	44 minutes ago	TsaoJack	0
Agent	Agent	TsaoJack 2 hours ago	3 days ago	TsaoJack	5 (83%)
Copilot for Microsoft 365	Microsoft		Never		--

2. Click “Topics” on the top.

3. Click the blue “+ Add a topic” button.

4. Click blank and then name the topic (In my example I named it Contact Advantech Support):

Step 3: Add Trigger Phrases

1. Leave it on “The agent chooses” trigger option which is the default and type in the box under “Describe what the topic does.” In my example I typed:

“This Topic should redirect the user to contact support when they ask for additional help with these key phrases or similar:

help

support

customer service

call tech support

contact advantech

i need assistance

phone number

how do I reach advantech”

The screenshot shows the 'Advantech Assistant Test Model 1' interface. The 'Topics' tab is selected in the top navigation bar. Below the navigation bar, the breadcrumb 'Contact Advantech Support' is visible. The main content area displays a topic configuration card for 'Contact Advantech Support'. The card has a 'Trigger' section with the option 'The agent chooses' selected. Below this, the 'Describe what the topic does' section contains a text box with the following content:

This Topic should redirect the user to contact support when they ask for additional help with these key phrases or similar:
help
support
customer service
call tech support
contact advantech
i need assistance
phone number
how do I reach advantech

The text box is outlined in red. Below the text box, there is a plus sign icon and a circle icon, indicating further configuration options.

Step 4: Build the Flow

1. In the visual flow editor.

2. Click the **+** (plus button) below the trigger.

- Choose “Send a message”

3. In the message box, you can paste this:

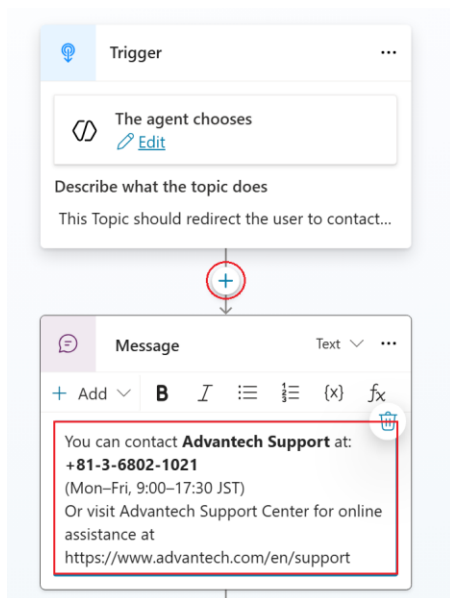

You can contact Advantech Support at:

+81-3-6802-1021

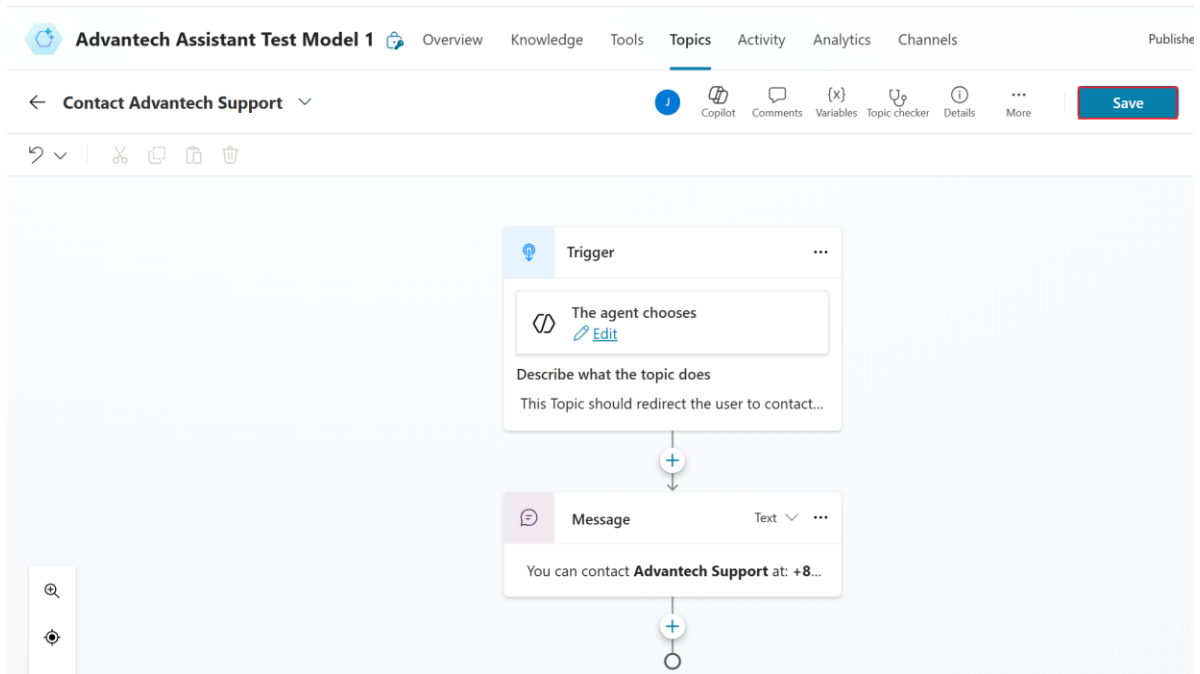

Mon–Fri, 9:00–17:30 JST

Or visit Advantech Support Center for assistance at

<https://www.advantech.com/en/support>

4. Click Save

Outcome: This is what the user will see when they type a help request.

Part IV: Giving others access to the Agent on the Teams

Step 1: Open your Agent on Copilot Studio:

The screenshot shows the Copilot Studio interface. On the left, the 'エージェント' (Agent) tab is selected, displaying details for an agent named 'エージェント'. The '共有' (Share) button is circled in red. A red box with the text '(1) Click on three dots.' points to the three-dot menu icon. Another red box with the text '(2) Click on share.' points to the '共有' button. A third red box with the text '(3) Add person's name.' points to the '名前、グループ、メールを追加します' (Add name, group, email) input field. A fourth red box with the text '(4) Confirm.' points to the '確認' (Confirm) button. The interface also shows a 'テスト' (Test) button and a '共有' (Share) button.

(1) Click on three dots.

(2) Click on share.

(3) Add person's name.

(4) Confirm.

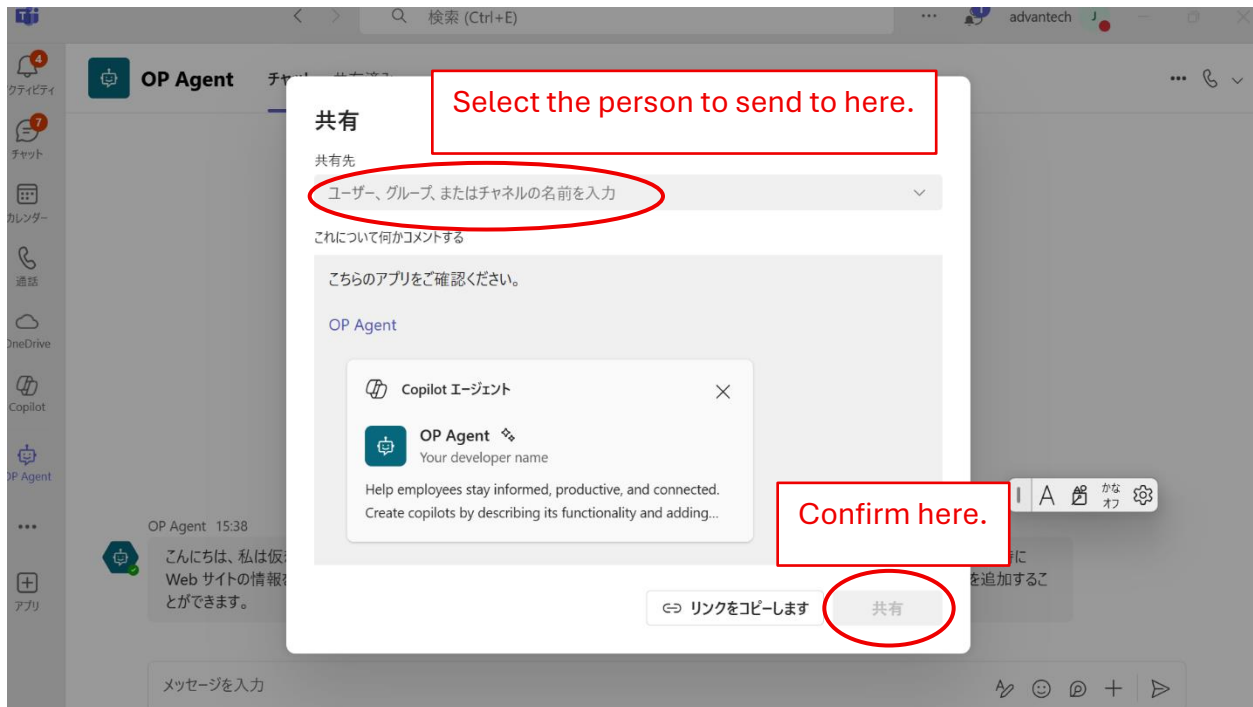

Step 2: Open the agent on your Teams:

Step 2: Click the three dots on the top-right corner and then click “Share”, the screenshot is in Japanese.

Step 3: Type the person’s name you want to share this agent on teams with and then confirm.

They will get a message to Add the Agent and they can add it from there.

Notes:

- **Agent should be shared with others from Copilot Studio using the three dots and the “Share” option like how we did in the Teams.**
- **Giving access on SharePoint and Copilot Studio are different. Just because a person has editing access on Copilot Studio does not mean they can edit the files from the agent’s knowledge in SharePoint.**
- **Add the Agent to your Teams before you share it to others on Teams.**
